GWR BRISTOL INSTALL VADIS DCII CONSOLES

Haar/Munich, Germany October 2001 - KLOTZ DIGITAL have completed the commissioning of a major audio mixing, routing and control system for the GWR group in the UK. The system includes 10 KLOTZ DCII digital mixing consoles and central technical area audio switching, all linked by a fibre optic audio network throughout GWR's new transmission headquarters in Bristol.

The powerful KLOTZ VADIS control software includes applications for transmission control switching and dynamic allocation of CODEC's to studios and in total the system networks a total of 18 studios and 5 technical areas within the GWR Bristol HQ.

Tim Donaldson, Head of Engineering Services for the GWR Group, feels that the choice of the KLOTZ VADIS for GWR Bristol has proven to be the right one, "The KLOTZ VADIS system has given us a proven networked audio hardware platform with easy to use control surfaces and a very flexible software control system. KLOTZ provided a very high level of support during the crucial commissioning and first operational use of the new complex and to date KLOTZ system reliability has been excellent. It's nice to find a product of this complexity which works virtually first time out-of-the-box!".

The KLOTZ system was supplied through UK dealer Clyde Broadcast to the Oxford Sound Company who in turn supplied the complete turnkey solution to GWR.

KLOTZ DIGITAL is the inventor and global market leader of digital signal processing and distribution systems for the modern Audio/Media industry. KLOTZ DIGITAL's VADIS platform architecture decentralizes the various types of signal processing and allows integration of multimedia and telematic services.
