## **KLOTZ DIGITAL SELLS 300<sup>th</sup> VADIS D.C.II CONSOLE**

*Munich/Kuala Lumpur - January 2002*

A mere one and a half years since its launch, KLOTZ DIGITAL has just sold their 300<sup>th</sup> VADIS D.C.II console. The 300<sup>th</sup> console has been delivered to Malaysia's national broadcaster Radio Television Malaysia (RTM). The overall product supply includes 19 VADIS D.C.II consoles – thirteen of which are 16 fader consoles and six are 12 fader consoles – 15 PARADIGM consoles and a VADIS Main Control Room (MCR). The digitalization of RTM Kuala Lumpur will be completed in two stages: the installation of VADIS and VADIS D.C.II technology firstly at RTM's training centre IPTAR and secondly at its broadcast centre WISMA RADIO. The two facilities will be interconnected via fibre-optic link with the International Broadcast Center (IBC), which was built on the occasion of the Commonwealth Games in Kuala Lumpur. The IBC was fully equipped with VADIS technology at the time of its construction in 1998.

Shortly after the launch of the VADIS D.C.II console XM Satellite Radio (USA), Austereo (Australia) and YLE (Finland) were the first customers to be supplied with this product. Over the last 18 months the VADIS platform has been developed for applications in the TV and production environment. The versatility of the D.C.II surface together with a wide range of different modules facilitated entry into these new markets. KLOTZ DIGITAL's VADIS and D.C.II products are currently used extensively by major broadcasters the world over, such as Radio Guangdong (China), BBC (Wales, Great Britain), and SABC (South Africa).

###

KLOTZ DIGITAL is the inventor and global market leader of digital signal processing and distribution systems for the modern Audio/Media industry. KLOTZ DIGITAL's VADIS platform architecture decentralizes the various types of signal processing and allows integration of multimedia and telematic services.
