## **DMG RADIO MELBOURNE PURCHASES DIGITAL CONSOLES AND ROUTING NETWORK FROM KLOTZ DIGITAL**

### **Munich/Sydney - June 2002**

KLOTZ DIGITAL Australia supplied DMG Radio Australia with the KLOTZ DIGITAL VADIS AudioMedia platform. DMG purchased 15 VADIS 880 Frames, 4 VADIS D.C.II Digital Audio Broadcasting Consoles and 9 LCD Routing Selector Panels for its new Melbourne facility. This new facility houses 2 on-air studios, 1 news studio, 1 news preparation area and 2 production suites utilizing KLOTZ DIGITAL LCD Routing Selector Panels for the new radio station license called NOVA 100. The KLOTZ DIGITAL VADIS platform provides central routing and signal distribution via its fiber optic network. Intercom, logic, and remote control functions are supported under the central control of the KLOTZ DIGITAL VADIS software.

“The “On Air“ sonic quality delivered by the KLOTZ DIGITAL system is second to none in the Melbourne market“ says Steve Adler Technology Director for DMG Radio Australia.

NOVA 100 is now only 5 months old and has won the first two rating periods for 2002 making it the number one radio station overall in the Melbourne metropolitan market. Predominately a music station, the unique programming format which has been established by DMG Radio Australia has been extremely well accepted by the listening audience.

DMG Radio Australia is one of the largest commercial radio networks in Australia. With 62 regional and metropolitan radio stations spread over 5 states, DMG operates stations in Queensland, New South Wales, Victoria, South Australia and Western Australia.

###
