NEW SOFTWARE RELEASE AND NEW ROUTER FOR KLOTZ DIGITAL'S AEON

AEON Software 2.0 Offers Improvements in User-Management and Console Flexibility

Munich, April 2007 – Effective immediately all KLOTZ DIGITAL AEON Audio-Networking Consoles are shipped based on the VADIS 212 router and control engine. Also the company announced today that AEON is now available with software release 2.0, bringing a new level of power and functionality to the versatile and well established mixing console. The upgrade to software release 2.0 provides DJs as well as engineers a variety of new features.

Via “User Rights Management” the engineer in charge is able to freely create user groups with individually assigned user rights. The user groups are password protected against unauthorized access. Individuals can have the right to change console adjustments according to their level of training, for example selection of sources to faders, channel presets, storage of snapshots, adjustment of the parameters EQs,

DYN, MIC preamp and many others. The “User Right Management” is an excellent tool to simplify the management of large user groups.

The AEON Setup Tool (AST) has also been improved. Clean feed busses can be changed individually on the console as well as switching of panorama/balance and pre/post fader allowing flexibility in creating return signals. AST offers access to the specification of the AES output stream format enabling the user to choose between professional and consumer formats. The GPI management has been enhanced by providing a trigger action during system start up to perform macro programmed actions such as routings and GPIs. Additionally the monitoring section has been improved for extending of talk back features. Monitor Mute is now also affected by microphone CUE actions following AEON’s intelligent MUTE logic. This will prevent damage to loudspeakers and operators ears, if a MIC CUE has been switched on accidentally.

Last but not least the software release 2.0 supports KLOTZ DIGITAL’s CMI GPI 16 as an external device to control and tie in additional devices. Thus the number of GPIs is expanded to a total of 24.

VADIS 212 for Enhanced System Stability and Absolute Silent Operation

In addition AEON is based on the new VADIS 212 router which now has absolutely silent operation. It features a fanless architecture and PSU which is installed at the front panel of the frame, offering easy accessibility and the ideal requirements to install the frame in noise sensitive on-air in-studio environments. Due to the integration of the PSU, frame size has been reduced to 3 RU saving space and qualifying the frame even more for direct in-studio installation. To guarantee reliable and fail-safe operation, a redundant PSU is available. All essential components, such as redundant PSUs and all audio or data interface cards can be replaced during operation according to KLOTZ DIGITAL’s “hot swap” technology.

End

###

AEON - Audio Networking Console

Combined with an integrated state of the art router, AEON provides a cost-effective mixing solution. AEON is based on KLOTZ DIGITAL's ultra slim console modules (1 inch / 2.5cm thick) allowing flexibility in console layouts and studio set up. AEON is available with 8, 12 and 16-fader control surfaces with professional features like 100mm faders, alphanumeric displays with 16 characters in two lines per channel, large ON/OFF buttons, CUE/PFL, programmable TalkBack functions, freely assignable routing and function key and status indication LEDs for the most important parameters and functions. The "AEON Setup Tool" software is included and enables users the configuration of the system exactly according to one's personal requirements.

KLOTZ DIGITAL AG of Munich, Germany is the world leader in AudioMedia Platform Technology. KLOTZ DIGITAL manufactures a variety of digital audio mixing consoles, the VADIS AudioMedia Platform, and VARIZONE systems for music distribution, paging and safety announcement installations. KLOTZ DIGITAL has 15 years experience in manufacturing and installing digital radio consoles and audio infrastructures. In fact, KLOTZ DIGITAL has over 1250 digital radio consoles and more than 3000 VADIS frames in service today.
