NEW AEON FEATURES: KLOTZ DIGITAL UPGRADES ITS WELL ACCEPTED DIGITAL MIXING CONSOLE

Munich, January 2008 – KLOTZ DIGITAL upgrades its well accepted digital OnAir mixing console, AEON and equips the console with two new exciting features. For excellent integration into the studio environment and interfacing with 3rd party equipment, KLOTZ DIGITAL now offers MADI interface cards for the AEON. The MADI cards can be configured to 56 or 64 channel mode. The second feature is the audio networking of AEONs via OCTO-BUS. This feature provides the opportunity to link several AEON consoles or connect the console to the Main Control Room (MCR) via a simple CAT5 cabling providing 8 bidirectional channels per bus. Each OCTO-BUS card features 4 bus lines; free busses can be used for OCTO-BUS break-in and break-out boxes tying e.g. microphones or headphones for monitoring purposes into the system. The advantages are obvious: Investments in additional D/A cards and mic cards can be saved. Additional space saving in the router frame provides the installation the opportunity to grow with the customers needs.

###
